Preface 9

M. Mazzola, J. Brown, A. Izzo, R. Abi Ghanem and M.F. Cohen – Progress towards development of biologically-based strategies for the management of apple replant disease 11

P. Creemers and S. van Laer – Key strategies for reduction of the dependence on fungicides in Integrated Fruit Production 19

I.J. Holb – Scab control management strategies in environmentally-benign apple production systems 31

M. Borovinova – Comparative study of fungicide treatments on apple cultivars – resistant and susceptible to scab 41

E. Pitera – Growth and initial bearing of scab resistant apple cultivars under conditions of limited fungicide use 47

D.E. Kruczyńska and K.P. Rutkowski – Quality and storage of Czech scab resistant apple cultivars 53

B. Meszka and A. Bielenin – Non-chemical possibilities for control of apple fungal diseases 63

W. Zeller – Status of biocontrol methods against fire blight 71

M. Hevesi, I. Hudák, L. Dorgai, A. Szentkirályi and T. Bubán – *Pantoea agglomerans* HIP32: a new bacterial antagonist to *Erwinia amylovora* . . 79

K. Geider – Characterization of antagonistic bacteria and a viral lysozyme for control of fire blight 87

P. Sobiczewski, K. Kielak, J. Puławska and S. Berczyński – Winter survival of *Erwinia amylovora* in apple terminal shoot tissue 93

S. Droby – Biological control of postharvest diseases of fruits and vegetables: difficulties and challenges 105

I. Slavov – Preliminary studies on the epiphytes for postharvest biological control of blue mould on apple fruits 119

I.V. Shevchuk – Efficiency of biofungicides against dominating diseases of cherries and plums under the different climatic conditions of Ukraine 125

T.E. Şesan – Integrated control of strawberry diseases 133

B. Gołębniak, A. Jarosz and J. Olechnowicz – Susceptibility of strawberry cultivars to leather rot (*Phytophthora cactorum* and *P. citricola*) 149

E. Król – Chitosan activity in an inhibition of *in vitro* growth of *Phomopsis viticola* and protection of grapevine canes against the pathogen 155
